In School

Take down notes

Review lessons

Doing homework with classmates

Answering exams

Class participations

Daily life

Checking karaoke lyrics

Checking recipes

Reading bookshare

Socialized with sighted people

Being updated to interact with friends

Digitalization is for blind learners as well.

Blinds students now can study and join a class together with the sighted individual, sighted can have virtual textbook while blind can use Next Touch 40 device .

Provides functions that visually impaired students needs

The dedicated software with a built-in braille translation function is compatible with various screen reading software and can be used on laptops, PCs, and Android devices.

Anyone without knowledge of braille codes can now teach blind students.

Braille displays are easy to use even for those without prior knowledge, and sighted individuals can assist blind students to ensure accuracy when reading.

Parents who do not know braille can now check child data

Sighted parents who want to keep track of their visually impaired children's work can now do so in normal characters, eliminating the need to learn Braille.
